

Geneva College – Academic Building

Jendoco Construction Corporation was selected through an interview process to provide Construction Management, Pre-Construction and General Construction services for the construction of the Northwood Hall Academic classroom facility at the Geneva College.

The Academic Building involved creating new computer classrooms, multi-purpose facilities, standard classrooms, and faculty offices. The building serves as the hub of the campus wide information system infrastructure and provides the capability of multi-media instruction in two of the multi-purpose classrooms. The facility includes extensive state of the art HVAC and electrical distribution systems.

The project was a three-story steel framed structure with exterior stone accents to compliment the old main building located at the center of campus. The Academic Building creates a main courtyard focus for the entire campus and was the first new construction in 25 years.

This facility was the first of six projects that Jendoco Construction Corporation completed for Geneva College.
