

### Geneva College Reeves Stadium

As Geneva College continues their transformation into the 21st Century, Jendoco Construction Corporation lends assistance by providing consistent construction services.. Part of this transformation includes Reeves Stadium.

Jendoco built the new Press Box with a Design-Build contract, which included the structure and all facilities systems (HVAC, Plumbing, Electrical and Data). The Press Box houses two concession areas, men's, women's and family restrooms, ticket booth, and a "Smart" Press Box, which includes numerous data technologies. The enlarged facility gives Geneva College enough room to accommodate all of their coaching, reporting, and official league needs.

Jendoco also enhanced the area surrounding the new Press Box. The new North entrance greets spectators with a grand trussed arch sign with stone pillars and arched gates. Upon entering the North Plaza, a breath taking view of the field helps spectators to appreciate the facility, and the donated brick pavers' shows Geneva's alumni support. The existing 5,000 seat concrete supported home bleachers were upgraded to new aluminum seating which are not only maintenance free, but also adds to the beautiful renovation. A new plaza between the Press Box and stadium seating provides a pleasurable gathering area.

Jendoco completed the project before the first football game overcoming scheduling and design issues. The work started in late March and was ready for the first game in August. Football practices and summer camps required Jendoco to closely control the site. The most difficult aspect of the project was the confined work area making construction and subcontractor coordination the key to a successful project.
