

## PNC Bank Green Branch - Oakmont PA

Jendoco Construction Corporation was the successful bidder on PNC Bank's Green Branch® in Oakmont, Pennsylvania. This 3,700 square foot facility utilizes PNC's latest prototype in its Green Branch® Building Program.

The project was completed in 18 weeks from ground breaking to occupancy. The project involved demolition of two existing structures and undercutting of the entire site to provide a stable building pad.

PNC Bank is the first major U.S. bank to design and build branches based on the U.S. Green Building Council Standards. Jendoco embraced PNC's corporate philosophy and worked closely with the owner and the design team to ensure that all LEED requirements were met for this project.

Jendoco was pleased to have been able to team with PNC and the entire design team to achieve another Green Branch® that not only fits within the community, but utilizes the resources of that community wisely.
