

Propel School Turtle Creek

Jendoco Construction Corporation was contracted by Propel School to renovate their existing building utilizing a “Design Build” contract.

The scope of work included renovations to the previously unused two story wing of the facility. Also included was the lowering of the crawl space under the occupied school to create headroom for offices and classrooms. This entailed excavation of two feet of earth with related shoring and replacement of columns and foundations. The project could not begin until school was out in mid June and had to be ready for school in August. The Building was completed on time due to a concentrated effort of all contractors involved.

The project also included life/safety upgrades including a sprinkler system throughout and addition of an elevator as well as other ADA upgrades.
