Celebrating 50 Years of Solid Reputation

It is rare to find a company that has been in business for 50 years. Jendoco has earned a reputation that few have been able to achieve.

Founded in 1957, Jendoco has shown its complete diversification.

Our portfolio includes Commercial buildings, Hospitals, Industrial, Manufacturing, Multi-family residential, Museums, Office buildings, Religious structures, Water and sewage treatment plants and LEED certified projects.

We are proud of numerous signature jobs that have contributed to Pittsburgh's landscape. We are also proud of our impressive list of repeat clients.

With this strong foundation we are looking forward to the next 50 years.

A closer look at 4 Current Projects

1. Saint Joseph Catholic Church

Architect - The Design Alliance

Since its original construction, approximately 90 years ago, St. Joseph Church had few external and internal changes. In early 2006, Fr. Michael Caridi and an anonymous member of the congregation took on the task of restoring the church but focusing mainly on the Chancel, to replicate its original design.

Having found old photographs of what it once looked like, the process soon took shape and a program was developed for the restoration. With the collaboration of the Design Team, Jendoco was able to minimize the demolition in order to prepare for the reconstruction of the Chancel and to restore it to its original design.

All of the reconstruction occurred during the normal work week. At the end of each week, everything was moved and cleaned in order to allow for the weekend services. Allowances were also made for daily masses and other church scheduled events.

From the old photographs, the project team was able to redefine most all of the minute details and develop drawings which represented the original. Lighting levels were upgraded in the Nave, as well as a sophisticated crossing lighting pattern focusing on the entire Chancel.

2. Carriage House Children Center

Architect - Moshier Studio

Jendoco Construction Corporation was selected to provide Pre-construction and General Construction Services for the Carriage House Children Center. The Center is located within the historic Wightman School Community Building. Our scope of work consisted of complete remodeling of the Basement Level, new lighting and mechanical upgrades to the First Floor and to add exterior ground face block storage buildings and a recycling center. The task at hand presented three major challenges that had to be overcome to ensure a successful project.

Complete renovations within a 100 year-old building, while the upper floors continued with their daily operations as a Child Care Facility.

Jendoco took great care and consideration with the construction procedures used to insure minimal inconvenience to the occupants. A secure walkway was built through the site's highly active playground area to protect the children and Instructors.

Jendoco worked closely with the design team and owner to comply with LEED EB requirements and obtain a Silver rating. Through the entire team's efforts, the Carriage House Children's Center will be the Nation's first Green Child-care Facility in a Renovated Building.

3. West Virginia University – Parkersburg

Architect - Burgess and Niple

Jendoco Construction Corporation was selected by West Virginia University to complete the \$2 Million Dollar addition to the Main Classroom Building at their Parkersburg Campus.

The structural integrity of the existing building was showing evidence of failure due to an expansive underground clay condition. Cracking of the existing walls of up to two inches in many areas needed structural reinforcing in order to stabilize the building.

The damaged exterior walls were removed and replaced with a curtainwall. This new curtainwall revitalized the campus image with its architectural design and added daylight to the interior classroom environment.

Due to the nature of the controlled movement allowed by the 3 braces, the curtainwall itself was designed to move. Every vertical glass panel was designed to move left and right and the slab anchors allowed vertical movement.

The project was completed six week ahead of schedule.

4. American Textile Company

Architect - Desmone and Associates

Jendoco Construction Corporation recently completed the 87,000 square foot expansion and renovation to the American Textile Company at RIDC Riverplace in Duquesne, Pennsylvania. Jendoco provided pre-construction services from schematics through construction documents, yielding a GMP (Guaranteed Maximum Price) that was within the owners' original budget.

As this is a reclaimed steel mill site, buried obstructions were encountered, but did not delay the schedule. The main structure was pre-engineered, the roof and siding had to match the 3 year old existing facility in color and profile. In addition to matching the metal components of the structure, Jendoco had to create architectural pre-cast concrete insulated panels to match existing in color, texture, and joint pattern. Jendoco and their subcontractors were able to achieve the desired results through extensive testing and mock-ups.

While the warehouse and manufacturing addition was being constructed the production in the existing facility had to be maintained. Scheduling and coordination with owner activities was critical and discussed at weekly project meetings to ensure a seamless transition and eliminated any down time in production.

Longtime RG Client Jendoco Construction Corporation Celebrates 50 Years in Business

(Note: This Ad was produced by Rothman Gordon to highlight their long relationship with Jendoco)

In today's economy, there aren't many companies that stay in business for 50 years. And there are even fewer who maintain the same legal counsel with whom they started. That is why Rothman Gordon is proud to recognize and congratulate Jendoco Construction Corporation on its 50th anniversary.

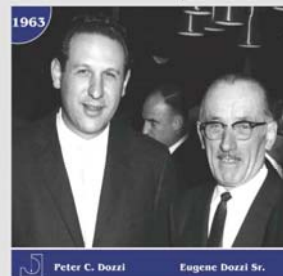

Jendoco Construction Corporation was founded in 1957 by Peter C. Dozzi. Ben Rothman, one of our firm's founders, was a mentor and business advisor to Pete. He and a young attorney named Emil Hermann did the legal work to form the fledgling business which had begun in the basement of Pete's home in Penn Hills. Pete chose the name Jendoco to honor his mother, Jenny Dozzi, who had died when he was a young teen. "Jenny" Dozzi's Company became Jendoco.

Pete Dozzi grew up as a construction laborer with his father Eugene. After graduating from the University of Pittsburgh with a degree in Civil Engineering, he continued to work in construction other than the two years of service in the Korean War. In 1957, he struck out on his own. Eventually his father joined Jendoco with Pete heading the office and Eugene heading the field. By 1966, Jendoco was doing well enough that it built its own headquarters, where it is still located today, on Lincoln Road, very close to where Pete grew up.

The relationship between Jendoco and Rothman Gordon continued to grow. Current CEO Tom Murphy and real estate attorney Tom Solomich began working together in 1973. After the passing of Ben Rothman and Emil Hermann, Tom became the lead Rothman Gordon contact for Jendoco. Pete is now the Chairman of the Board and Domenic Dozzi, his son, is President and his daughter, Petrina Lloyd, is Corporate Secretary.

Jendoco has earned a reputation over the past 50 years as a premier quality general contractor. Jendoco constructs retail, office and warehouse projects and has developed a niche in the university and cultural areas, as well as houses of worship. A gallery of their projects and numerous awards can be viewed on their website at www.jendoco.com. Rothman Gordon is proud of our long-standing relationship with Jendoco Construction Corporation and we look forward to the next 50 years!
